

BussiPro Oy's key personnel have extensive and unique experience in building buses and managing servicing and maintenance activities for Finland's largest transport company and its fleet. In combination with our status as a leading supplier of high-quality spare parts, this experience guarantees that we can provide our clients with a cost-efficient solution for the management of their fleet and spare-parts operations.

BussiPro offers bus companies and repair shops the following products and services:

Spare parts for buses

- Replacement glass: supply of replacement windscreens, side and door glass, and destination indicator signs for buses, coaches, HGVs, and caravans, along with the sealants, glass adhesives, and special tools needed for their installation.
- Glass from the following original equipment manufacturers (OEM supplies): Pilkington, Finn Lamex, and Jaakko-Tuote.
- Spare parts from bumper to bumper. Our excellent relationships with original automotive equipment manufacturers in Germany and elsewhere ensure cost-efficient solutions for all replacement-part needs, even when the spare parts you need are hard-er to find, as with AdBlue devices, transmission components, fuel-injection system components (e.g., common rail nozzles), and parts for air-conditioning and heating systems (from, for instance, Webasto and Spheros).
- OEM spare parts from companies such as Bosch, Mekra, Webasto, Knorr-Bremse, WABCO, Meritor, Lemförder, Sachs, Mitsubishi, and Spal.
- Reliable, professional-quality adhesives and sealants from Loctite, Teroson, and Henkel.

Specialist consulting

- Specialist consulting services to aid transport companies and other vehicle-industry operators in the development and improvement of their servicing and workshop operations and with their spare-parts management.
- Body and chassis repairs and powertrain reconditioning carried out by our reliable partners.
- Training in repairs that require specialist skills, including CAN bus work, operations involving electronic powertrain control modules, and installation of replacement glass.

Fire-suppression equipment

Automatic fire-suppression systems. We are certified to install Dafo and Fogmaker fire-suppression equipment in accordance with the FK/SBF-127 and FK/SBF-128 guidelines. Reliable work with high-pressure water systems, which are by far the best fire-suppression solution for engine fires. Use of liquid fire-suppression agents:

- liquid suppresses fire when it vaporises
- water absorbs heat, helping to prevent reflash – the temperature of the fire drops by more than 800 °C in 10 seconds
- an additive in the water forms a fire-retardant coating over the area of the fire, which further protects against the possibility of reflash

We invite you to meet us at the Busworld Europe exhibition, to be held in Kortrijk in Belgium on 20–25 October 2017. Please visit us in exhibition area 109d.
