

## NEW FROM BUSSIPRO

### **A new concept that brings considerable savings to using bus fleets**

BussiPro is introducing a new way to enhance the use of your bus fleet. The approach maximises the proportion of the time your vehicles are in active operation, for less idle time. The new solution not only ensures timely availability of high-quality spare parts but also aids in predicting future needs and hence preventing unpleasant surprises.

Traditionally, in dealing with spare parts, attention typically is paid to price and delivery reliability only, whereas BussiPro's model of operation is designed for finding out in advance which parts will be the best match for the customer's specific needs. The idea is not to simply keep ordering the same parts as before but to consider developments in the industry and the new options available, each time.

The concept encompasses three aspects of enabling optimisation of bus-fleet use and management. In simple terms, the optimisation is focused on

- increasing the mileage between service interruptions,
- reducing the ratio of cost to distance driven, and
- increasing the profitability of your fleet.

- 1. Analysing the required use of your fleet and the current models of operation**
- 2. Reporting on the analysis, which includes suggestions for development and follow-up**
- 3. Signing a partnership agreement**

**BussiPro** is a Finnish company with solid expertise in bus- and coach-based transport and technologies. The company is currently expanding its operations to serve Central European bus and coach companies. Our extensive network of carefully selected partners ensures availability of high-quality, cost-efficient OEM spare parts for all buses.
