BusCare - concept brings substantial savings for bus fleets

by BUSSPRO

BussiPro now offers an improved way of managing your bus or coach fleet. The approach maximises the percentage of the time your vehicles are active on the road – they spend less time unused. The new solution not only ensures timely availability of high-quality spare parts but also aids in predicting future demand. Thus, you can avoid unpleasant surprises.

The concept covers three aspects of implementing the concept and deploying it to optimise bus fleet management:

BussiPro is a Finnish company with solid expertise in transport and technology using buses and travel coaches. The company is currently expanding its operations to serve bus and coach companies in Central Europe. Our extensive network of carefully selected partners ensures the availability of high-quality, cost-effective original spare parts for all buses.
